

"Individual NSN Unit Price Display on Web":

"The MEDSILS NSN display on the web provides two different unit prices for both medical and non-medical items.

The first Unit Price is displayed under the "DLSC Common Data" section. The "DLSC Common Data" section contains price data that is the same for all the services and is identified on the official Federal Logistics Information System (FLIS) record. This price is determined by the commodity manager of the item and in some cases contains a surcharge.

The second Unit Price is displayed under the "Army Data" section. The "Army Data" section contains price data that is specific to the Army and can vary from the "DLSC Common Data" for this same data element. The Army price reflected is determined by prime vendor buys and independent equipment buys made by Army. This Army price is also published in FLIS under Army's specific service data. If both the Common Data Unit Price and the Army Data price are the same, this indicates Army procurement has not been initiated.

For Army Unit Assemblage NSNs, please note that the price reflected both in "DLSC Common Data" and Army Data" is based on a summary of the individual prices of the set components.

Note also that other Service displays, i.e., Air Force, on the USAMMA MEDSILS web display may reflect unique Service pricing data as well."
